SUMMARY

Software Developer with hands-on experience in AI agent development, LLM feedback & evaluation, multi-turn system interactions, and building production-grade full-stack systems. Proven expertise in debugging complex behaviors, designing evaluation rubrics with objective criteria, stress-testing real-world scenarios, and providing detailed technical feedback to improve AI model outputs. Strong background in React, backend integration (Python, Java, Node.js, PHP), REST APIs, and automation tools. Passionate about shaping autonomous AI agents for domains like health, education, and daily life. Fully remote-ready with flexible availability.

EDUCATION

BSc in Computer Science · York University — Toronto, ON, Canada *2021 – 2025*

Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming, Software Engineering, Web Development

TECHNICAL SKILLS

Frontend: JavaScript | React | Next.js | HTML & CSS | Bootstrap | Tailwind CSS | Material UI | WordPress | Elementor | WooCommerce | Excel

Backend & Tools: Java | PHP | Python | Node.js | RESTful APIs | MySQL | GitHub | Git | Android Studio | Selenium | Data Annotation Tool (Label Studio)

CS Fundamentals: Data Structures | Algorithms | Data Analysis | Testing & Debugging | Cybersecurity Best Practices | Object Oriented Programming | LLMs | API design | Automation | UI & UX

EXPERIENCE

Software Developer (Full Stack) · Datacom Group *11/2025-03/2026*

- **Resolved critical UI/UX bugs** including broken cinema marker interactions, sticky header scroll overlap, map library switching hang states, and unrestricted global map panning — applying React Context, CSS positioning and geographic boundary constraints.
- **Built a cinema detail feature from scratch** integrating the TMDB REST API to surface live film showings with posters and showtimes alongside a modular mock review system — enabling full cinema discovery in a single interaction.
- **Delivered a full UI redesign** with a custom Material UI dark theme, cinematic gold accent system, gradient backgrounds, animated hover states and skeleton loaders — elevating the app from prototype to production-grade interface.
- **Engineered geolocation personalization and sidebar filters** (ticket price, ratings, distance, products) using the browser Geolocation API — improving cinema discoverability and delivering a contextually relevant user experience.

Data Annotator (AI) · Outlier AI via Upwork (Part-Time) *01/2026-03/2026*

- **Evaluated** and **ranked AI-generated responses across diverse prompts**, designing and applying objective evaluation rubrics based on accuracy, coherence, creativity, logical reasoning, bias, safety, and human preference alignment to train and refine Large Language Models (LLMs).
- **Provided high-density technical and qualitative feedback** on AI outputs in areas including general knowledge, creative writing, multi-step reasoning, and complex workflows — directly contributing to improved model performance and naturalness.
- Conducted **detailed linguistic and behavioral assessments** on English text data, identifying failure patterns, edge cases, and systemic issues to enhance training data quality for generative AI systems.
- Assessed **multi-turn and contextual interactions in AI responses**, simulating real-world usage scenarios to ensure robust, reliable agent-like behavior.

Web Developer (Elementor, WooCommerce, WordPress) · Self-Employed *06/2025 – 10/2025*

- **Designed sleek, modern websites** outperforming top 3 competitors in visual appeal within the niche — directly enhancing client credibility and conversion rates.
- **Optimized website performance** achieving 95/100 on Google PageSpeed Insights and 100/100 Core Web Vitals across SEO, Accessibility and Best Practices — outperforming competitors scoring 50–80.
- **Developed custom-coded solutions** using HTML, CSS, JavaScript and PHP to deliver unique client-specific features, contributing to sub-2 second load times.
- **Engineered flawless responsiveness** across all devices — achieving pixel-perfect layouts and 100% mobile/tablet compatibility, reducing bounce rate, and improving user experience.

Junior Software Developer (AI Automation) · Hackathon *06/2025 – 09/2025*

- **Developed Java algorithms for an AI-powered license plate** recognition system, including **automation of data extraction** and multi-step processing pipelines that reduced manual verification time by 40%.
- **Automated vehicle data collection and enrichment using Selenium WebDriver** in live web environments — building robust scraping and parsing logic for real-time, non-mocked data handling.
- Designed robust **date-parsing algorithms with error handling** and optimized system performance for scalable processing of 10,000+ daily requests.

PROJECTS

Web-Based Interactive Learning Kit · HTML, CSS, JavaScript

A responsive web application designed to teach computational problem-solving through interactive challenges, flowcharts and multiple solution approaches.

- **Built a responsive learning kit** enabling interactive learning across 35+ unique computational problems, each with dedicated challenge buttons and structured learning paths.
- **Integrated a Design button** per problem displaying algorithm flowcharts — improving user understanding of problem-solving logic through visual aids.
- **Implemented a solution repository** offering 2+ solving approaches per problem, providing multiple methodologies to deepen user comprehension and adaptability.
- **Architected a scalable component structure** allowing new problems to be added modularly without disrupting existing functionality — demonstrating clean code organization principles.

Android Scientific Calculator Application · Android Studio, Java

A fully native Android calculator app built with Material Design principles, optimized for performance and visual consistency across a wide range of Android devices.

- **Engineered a visually polished, ergonomic UI** using Material Design principles — boosting user engagement by 25% and establishing a consistent brand identity across the application.
- **Implemented robust error-handling mechanisms** for arithmetic computations — reducing user-reported crashes by 40% and ensuring reliable performance across all edge-case inputs.
- **Optimized responsive layouts** across 100+ Android devices and screen resolutions — achieving consistent UI performance and visual integrity regardless of hardware configuration.
- **Delivered the application end-to-end** from UI design and logic implementation to testing and debugging — demonstrating full ownership of the Android development lifecycle.

AWARDS & ACHIEVEMENTS

The Daily Star Award · Outstanding Results in IGCSE & IAL *Issued by The Daily Star*

Awarded to students achieving outstanding results in the IGCSE and IAL examinations — recognizing academic excellence at the secondary level.
